CUSTOMISED SOLUTIONS

We manufacture customised lifting and handling solutions designed to work reliably even in demanding conditions. These include, for example, specially dimensioned trolleys suited to unusual runway beam types or special materials – such as stainless steel.

PRODUCT DESCRIPTION

STAINLESS STEEL TROLLEY FOR AN RHS BEAM

For a customer's food production facility we built a custom trolley designed for a stainless steel RHS 200×200 square beam. The trolley is entirely stainless steel – right down to the bearings – and meets the requirements of the crane regulations as well as the customer's hygiene and material criteria.

Thanks to this solution, the customer could use cost-effective track material without compromising on functionality or hygiene requirements. The result is a system that is both technically sound and economically sensible.
