JIB CRANES: SPECIAL STRUCTURES AND DESIGN

TUOTETEKNO OY
NOSTO- JA SIIRTOLAITTEET

PRODUCT DESCRIPTION

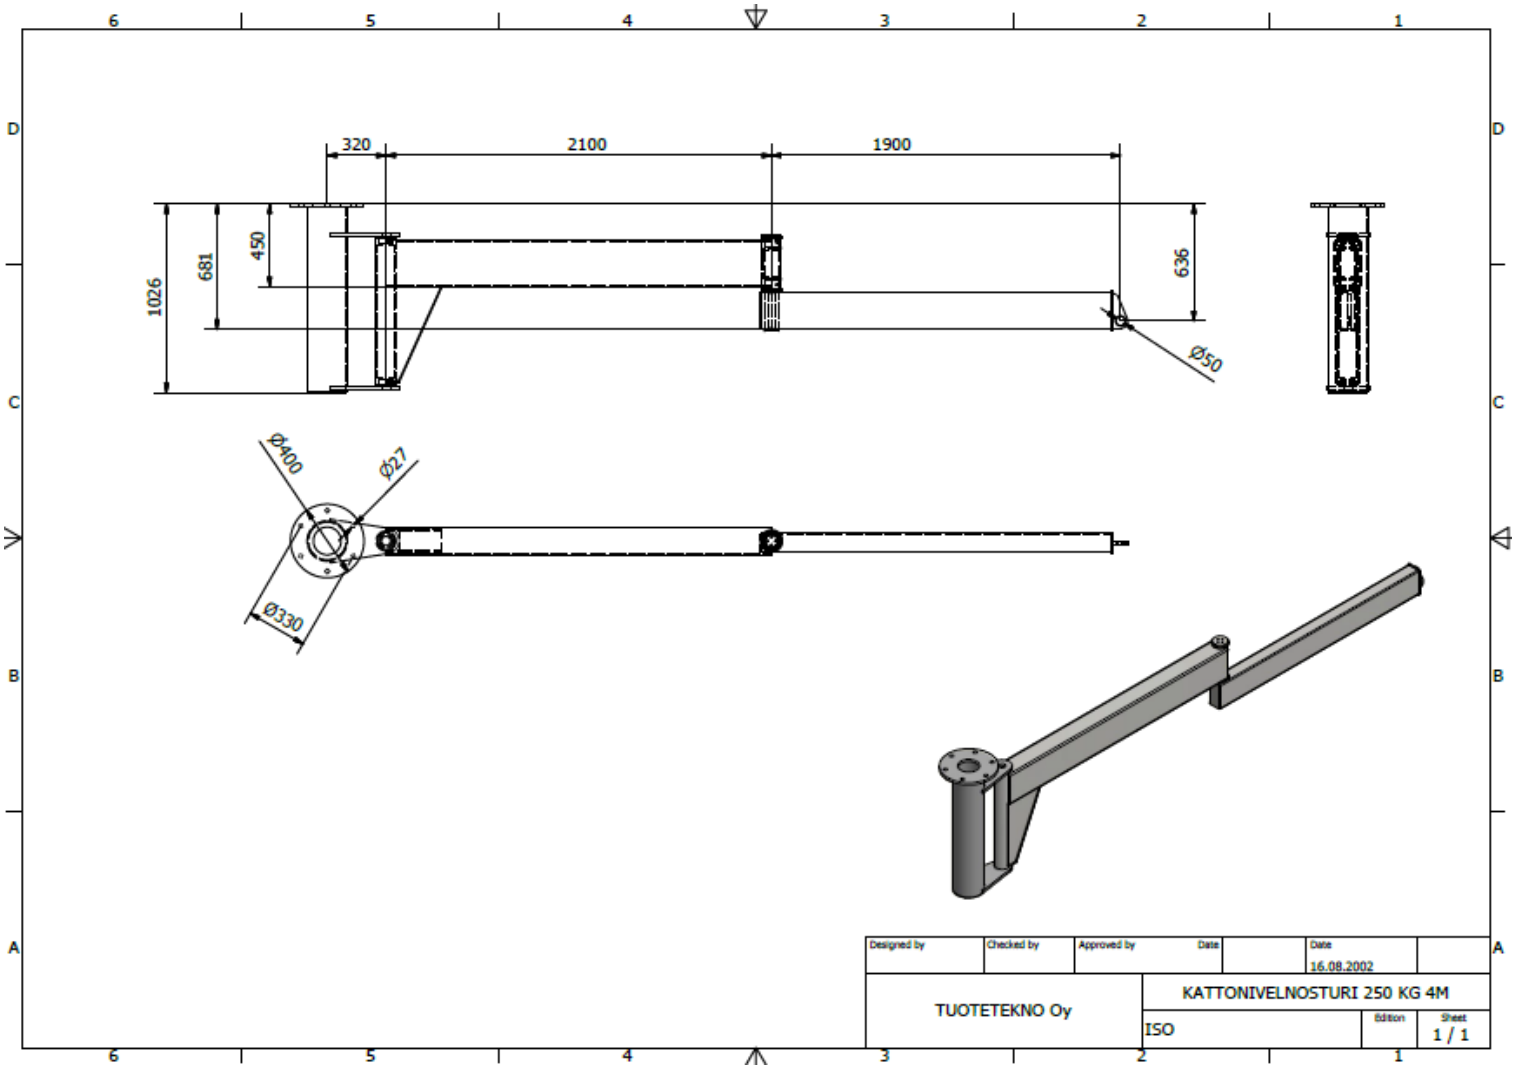

CUSTOM SPECIAL STRUCTURES ARE DESIGNED AND BUILT TO THE CUSTOMER'S NEEDS

Possible special structures:

- special surface treatment for food or chemical environments
- ceiling mounting solutions
- reinforced columns

A working solution is teamwork between the crane designer and the structural designer

Many things must be considered in the design: working areas, usability, conditions and, of course, the strength of the mounting point. When all of these are taken into account, the customer gets a working solution that makes work easier, saves space and time and reduces strain. In the first survey phase we get to know the work and its challenges. Next, a plan is drawn up and the strength of the structures is verified. Finally, we move on to manufacturing and installation, so that the crane is installed correctly, inspected for commissioning and taken into use.

A ceiling-mounted articulated jib crane saves floor space and gives an equally wide working area
