LIFTING BEAMS

Lifting beams are especially suited to moving long pieces or pieces suspended from several lifting points. Typical applications include engineering workshops, the steel and construction industries, ports and logistics centres – environments where large, heavy or unevenly loaded

pieces are handled.

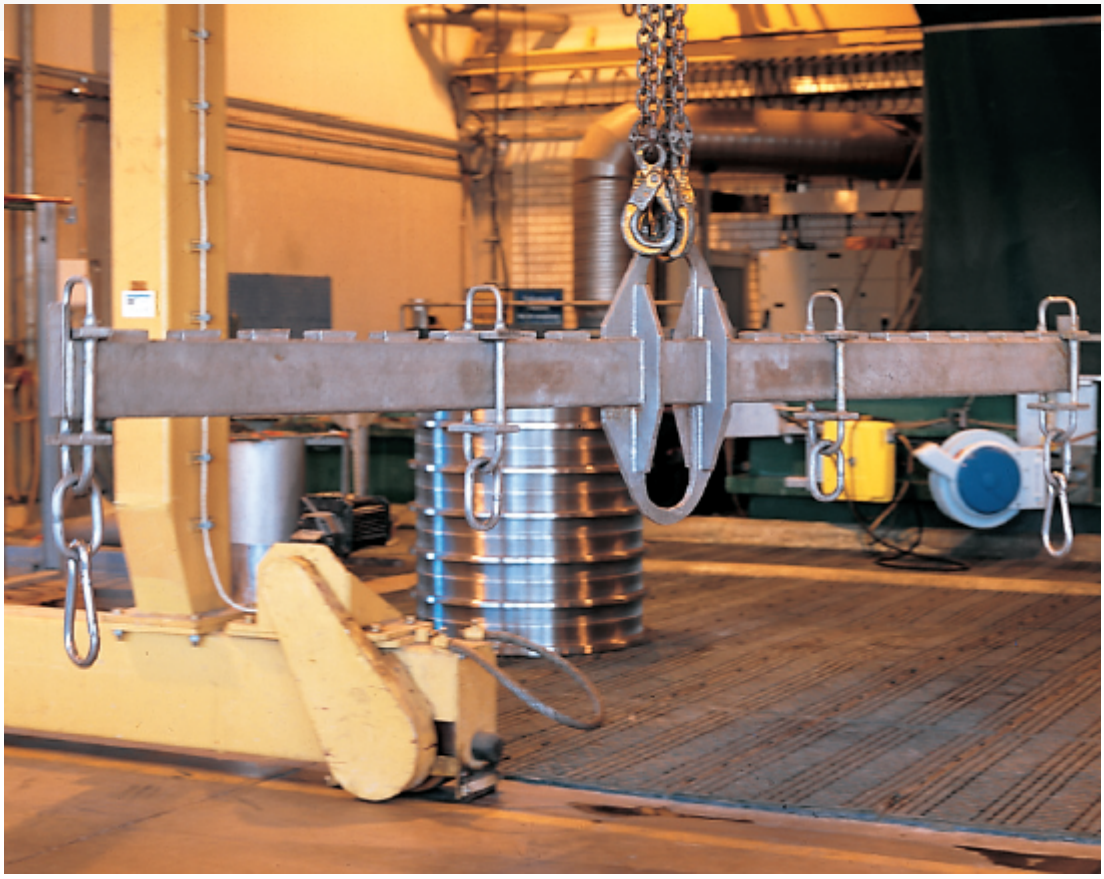

PRODUCT DESCRIPTION

Every lifting beam is designed individually to the customer's needs, taking into account the shape and mass of the piece, the operating environment and the safety of the lifting work. Lifting beams are CE-marked and built in accordance with the Machinery Directive. Delivery always includes the appropriate documentation, and we can also provide user training when needed.
