PRODUCT DESCRIPTION

Scaffold track – a safe and efficient lifting solution

On construction sites, efficiency and safety go hand in hand. A profile track for scaffolding is an excellent way to lift loads smoothly and safely. It allows controlled movement of loads on the scaffold without heavy manual lifting, reducing the risk of accidents and increasing efficiency.

Why choose a profile track for scaffolding?

- **Safe and stable lifting solution** – The profile track provides a safe, even travel path, minimising load-handling risks and making lifting predictable.
- **Quick and easy installation** – The profile track can easily be attached to different types of scaffolding, allowing flexible use on different sites.
- **Improves ergonomics** – Reduces manual handling of heavy loads, easing physical strain on workers and reducing the risk of injury.
- **Suits many kinds of lifts** – The profile track is compatible with various lifting devices, such as electric winches and hoists.
- **Makes work more efficient** – Lifting work runs more smoothly, saving time and improving the site's overall efficiency.

Applications

The profile track is especially suited to lifting solutions attached to scaffolding. It is ideal for:

- Construction sites that need repeated lifts on scaffolding
- Facade renovations and other sites where materials need to be lifted higher
- Industrial and repair sites where safety and ergonomics come first

Safety first

Lifting loads safely on scaffolding is a critical part of site safety. Using a profile track reduces the risk of falling and tipping loads, because the load stays under control throughout the lift. The solution complies with industry safety regulations and is compatible with standardised lifting equipment.

Order a profile track for scaffolding

Want to improve lifting work on your site? Contact us and ask more about profile tracks for scaffolding – our experts will help you choose the best solution for your needs!
